

**MPH-002**

# **ASSIGNMENT BOOKLET**

**M.Sc. (Physics) Programme  
(MSCPH)**

**CLASSICAL MECHANICS-I**

**Valid from 1<sup>st</sup> July, 2023 to 30<sup>th</sup> June, 2024**

**School of Sciences  
Indira Gandhi National Open University  
Maidan Garhi, New Delhi-110068  
(2023-24)**

Dear Student,

Please read the section on assignments in the Programme Guide for M.Sc. (Physics). A weightage of 30 per cent, as you are aware, has been earmarked for continuous evaluation, **which would consist of one tutor-marked assignment** for this course. The assignment is in this booklet. The total marks for this assignment is 50, of which 20 marks are needed to pass it.

### Instructions for Formatting Your Assignments

Before attempting the assignment please read the following instructions carefully:

- 1) On top of the first page of your answer sheet, please write the details exactly in the following format:

---

**ENROLMENT NO.:** .....

**NAME:** .....

**ADDRESS:** .....

**COURSE CODE:**.....

**COURSE TITLE:** .....

**ASSIGNMENT CODE:** .....

**STUDY CENTRE:** .....

**DATE:** .....

---

**PLEASE FOLLOW THE ABOVE FORMAT STRICTLY TO FACILITATE EVALUATION AND TO AVOID DELAY.**

- 2) Use only foolscap size writing paper (but not of very thin variety) for writing your answers.
- 3) Leave 4 cm margin on the left, top and bottom of your answer sheet.
- 4) Your answers should be precise.
- 5) **Submit the complete assignment answer sheet within the due date.**
- 6) The assignment answer sheets are to be submitted to your Study Centre as per the schedule. **Answer sheets received after the due date shall not be accepted. We strongly suggest that you retain a copy of your answer sheets.**
- 7) This assignment is **valid from 1<sup>st</sup> July, 2023 to 30<sup>th</sup> June, 2024**. If you have failed in this assignment or fail to submit it by June 30, 2024, then you need to get the assignment for the year 2024-25, and submit it as per the instructions given in the Programme Guide.
- 8) **You cannot fill the examination form for this course** until you have submitted this assignment. For any queries, please contact: [mbnewmai@ignou.ac.in](mailto:mbnewmai@ignou.ac.in), [slamba@ignou.ac.in](mailto:slamba@ignou.ac.in)

We wish you good luck.

## Tutor Marked Assignment CLASSICAL MECHANICS-I

Course Code: MPH-002

Assignment Code: MPH-002/TMA/2023-24

Max. Marks: 50

**Note: Attempt all questions. The marks for each question are indicated against it.**

1. a) A particle of mass  $m$  moving to the right with an initial velocity  $u$  collides elastically with a particle of unknown mass  $M$  coming from the opposite direction. After the collision  $m$  has a velocity  $u/2$  at right angles to the incident direction, and  $M$  is deflected back making an angle of  $45^\circ$  degrees to its incident direction as shown below. Calculate the ratio  $M/m$ .

- b) Write down the equations of constraint/s for the following systems and classify them as holonomic/nonholonomic and scleronomic/rheonomic:
- i) a particle of mass  $m$  sliding down the surface of a sphere of radius  $R$  without friction, under the action of gravity.
  - ii) a simple pendulum of length  $L$  for which the point of support is oscillating vertically with an angular speed  $\omega$  and amplitude  $A$ . (5+5)
2. Using the D'Alembert's Principle determine the equation of motion for an Atwood's machine with masses  $M$  and  $3M$ . (10)
3. The kinetic and potential energies for a mechanical system with two generalized coordinates  $q_1$  and  $q_2$  are

$$T = q_2^2 \dot{q}_1^2 + 2\dot{q}_2^2 ; V = q_1^2 - q_2^2$$

- i) Write down the Lagrangian for the system.
  - ii) Obtain the expressions for the generalized momenta.
  - iii) Derive the Euler Lagrange equations of motion for the system.
  - iv) Obtain the energy function for the system. (2+2+4+2)
4. A particle moves under a central force,  $f(r) = -kr^3 \hat{r}$ ,  $k > 0$ . Is this an attractive or a repulsive force? Find the radius and energy of the circular orbits. (5)

5. A particle is scattered by a rigid sphere of radius  $R$ , as given in the figure. Determine the differential scattering cross-section and the total scattering cross-section. (5)

6. Consider three identical springs and two masses  $m_1 = m$  and  $m_2 = 2m$ , as shown in the figure. The motion of the two masses are constrained along the line joining them. Find the normal mode frequencies and the normal coordinates. (10)
