(b) White-collar compensation.

- (c) The payment of wages Act, 1936.
- (d) Employees' pension scheme.

(e) Wage incentive plans.

SECTION - B

Read the following case and answer the questions given at the end.

P & Company is an engineering industry, engaged in manufacturing of drawing office equipments products, for the past three decades. The products are very well received in the market. The market share for the product used to be around seventy five per cent and during the earlier part of the decade, the Company had been enjoying a monopolistic market. The retain the status in the market, the management laid down great stress on quality and productivity from the initial stage itself. The Company had been monitoring the productivity levels closely and had an individual incentive scheme during the last two decades.

During the last ten years, the life cycle of the Company came to a sudden halt with the advent of electronic systems like CAD/CAM. The Company had, therefore, to launch some new products. This new product entailed additional investments on machineries. The Company had also to induct additional manpower. The additional manpower were all raw hands requiring training - an extra expenditure. The bonus, as per The Payment of Bonus Act, depended on allocable and allowable surpluses. A dispute with regard to the bonus had arisen.

During the year in dispute, since there has been a heavy investment on the new project, the interest charges and the depreciation completely wiped out the profits. Therefore, as per the Payment of Bonus Act, the maximum bonus of 8.33 per cent only was to be offered. This was not acceptable to the workers as they have been receiving bonus of a minimum of 20 per cent all these years and were reluctant to accept a cut in the monetary rewards. They had thus, served a strike notice. The Personnel Officer suggested that, since the Payment of Bonus Act is finance oriented, it does not necessarily reflect the productivity efforts of the employees, since during the year, the profits could be depressed due to depreciation and interest charges on account of heavy investments. The Management should also ensure maximum cooperation from the employees to maximise productivity and employment. The Personnel Officer felt that if the payments are made based on the Bonus Act, it will only result in demotivating the employees during a crucial period. He suggested to link the bonus with productivity. This had, thus become a grievance and he suggested that the Management should pay 20 per cent as bonus, part of the payment being paid under the pretext of good industrial relations.

Ouestions:

- Identify the key issues in this case. (a)
- Critically review the approach of personnel (b) officers.
- What will be your approach to the issue? (c)
