# POST GRADUATE DIPLOMA IN APPLIED STATISTICS (PGDAST) Term-End Examination <br> December, 2020 <br> MSTE-002 : INDUSTRIAL STATISTICS—II 

Time : 3 Hours
Maximum Marks : 50
Note: (i) Question no. 1 is compulsory.
(ii) Attempt any four questions from the remaining question nos. 2 to 7.
(iii) Use of scientific calculator (nonprogrammable) is allowed.
(iv) Use of Formulae and Statistical Table Booklet for PGDAST is allowed.
(v) Symbols have their usual meanings.

1. State whether the following statements are True or False. Give reasons in support of your answers :

$$
5 \times 2=10
$$

(a) The error term $e$ in the regression model:

$$
\mathrm{Y}=a+b \mathrm{X}+e
$$

always has mean 0 and variance 1 .
(b) The forecast values of the following data using exponential smoothing, method with weight $w=0.1$ are $5,4.8$ and 4.72 respectively :

| Year | Production <br> (in '000) |
| :---: | :---: |
| 2015 | 5 |
| 2016 | 3 |
| 2017 | 4 |

(c) A mobile repairman finds that the time spent on his job follows an exponential distribution with average 20 minutes. He repairs mobile sets on the basis of first come first serve pattern. If the arrival of mobiles is approximately Poisson with an average rate of 12 per 12 -hour day, then repairmen's expected idle time each day is 8 hours.
(d) A region $\mathbf{R}$ is convex if and only if, for any two points $\left(x_{1}, y_{1}\right)$ and $\left(x_{2}, y_{2}\right)$ on the region $\mathbf{R}$, the point :

$$
\left(\lambda x_{1}+(1-\lambda) y_{1}, \lambda x_{2}+1(1-\lambda) y_{2}\right)
$$

lies entirely in $R$.
(e) If there are 3 equations having 4 variables in an LPP, then the maximum number of possible basic solutions is 4 .
2. A manufacturer has three distribution centres at $\mathrm{D}_{1}, \mathrm{D}_{2}$ and $\mathrm{D}_{3}$. These centres have availability of 30,25 and 35 units of products respectively. His/her retail outlets at $\mathrm{R}_{1}, \mathrm{R}_{2}, \mathrm{R}_{3}$ and $\mathrm{R}_{4}$ require $20,10,20$ and 40 units of the products, respectively. The transportation cost (in ₹) per unit between each centre and outlet is given below :

Distribution Retail Outlet
Centre
$\begin{array}{llll}\mathrm{R}_{1} & \mathrm{R}_{2} & \mathrm{R}_{3} & \mathrm{R}_{4}\end{array}$
$\mathrm{D}_{1}$
$\mathrm{D}_{2}$
$\mathrm{D}_{3}$

| 19 | 30 | 50 | 10 |
| :--- | :--- | :--- | :--- |
| 70 | 30 | 40 | 60 |
| 40 | 8 | 70 | 20 |

(a) Find initial basic feasible solution to minimise the cost of transportation using Vogel's approximation method. 4
(b) Determine optimal solution by MODI method.
3. A pharmaceutical company is producing a single product and is selling it through five agencies situated in different cities. All of a sudden, there is a demand for the product in another five cities not having any agency of the company. The company is facing the problem in deciding how to assign the existing agencies to dispatch the product to deficit cities in such a way that the travelling distance is minimized. The distance between the agencies and deficit cities (in km ) is given in the following table : 10

Deficit City

|  |  |  | M | N | O | P |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Agency | Q |  |  |  |  |  |
|  | A | 160 | 130 | 115 | 190 | 200 |
|  | B | 135 | 120 | 130 | 160 | 175 |
|  | C | 140 | 110 | 125 | 170 | 185 |
|  | D | 50 | 50 | 80 | 80 | 110 |
|  | E | 55 | 35 | 80 | 80 | 105 |
|  |  |  |  |  |  |  |

Determine the optimum assignment schedule so as to minimise the total travelling distance.
4. A company believes that the number of salespersons employed is a good predictor of sales. The following table exhibits sales (in thousand rupees) and number of salespersons employed for different years :

| Sales | No. of Salespersons |
| :---: | :---: |
| 12 | 10 |
| 13 | 15 |
| 11 | 12 |
| 15 | 18 |
| 18 | 21 |
| 18 | 22 |
| 13 | 19 |

(i) Draw the scatter diagram to the data. 2
(ii) Fit a regression line. 5
(iii) Comment on the goodness of fit of the regression line after calculating the coefficient of determination. 3
P. T. O.
5. The following data give the average quaterly prices of a commodity for three years : 10

| Year | $\mathbf{2 0 1 5}$ | $\mathbf{2 0 1 6}$ | $\mathbf{2 0 1 7}$ |
| :---: | :---: | :---: | :---: |
| I | 13 | 14 | 15 |
| II | 12 | 16 | 15 |
| III | 15 | 18 | 18 |
| IV | 15 | 17 | 19 |

Compute seasonal indices using ratio to moving average method.
6. (a) A firm makes two types of furniture : chairs and table. The contribution to profit by each product calculated by the account department is ₹ 500 per chair and ₹ 800 per table. Both the products are to be produced on three machines $\mathrm{M}_{1}, \mathrm{M}_{2}$ and $\mathrm{M}_{3}$. The time required (in hours) by each product and total time available (in hours) per week on each machine are as given ahead :

| Machine | Chair | Table | Available <br> (Time) |
| :---: | :---: | :---: | :---: |
| $\mathrm{M}_{1}$ | 3 | 3 | 36 |
| $\mathrm{M}_{2}$ | 5 | 2 | 50 |
| $\mathrm{M}_{3}$ | 2 | 6 | 60 |

How should the manufacturer schedule his production in order to maximize the profit? 6
(b) A company requires 1500 units per month. The ordering cost is estimated to be ₹ 50 per order. The carrying cost is $5 \%$ per unit of average inventory per year. The purchase price is $₹ 50$ per unit, Find the economic lot size to be ordered and the total minimum cost. 4
7. (a) A machine operator has to perform two operations, turning and threading, on a number of different jobs. The time required
P. T. O.
to perform these operations (in minutes)
for each job is given below :

| Job | Time of <br> turning <br> (in minutes) | Time of <br> threading <br> (in minutes) |
| :---: | :---: | :---: |
| 1 | 3 | 8 |
| 2 | 12 | 10 |
| 3 | 5 | 9 |
| 4 | 2 | 6 |
| 5 | 9 | 11 |

(i) Determine the order in which the jobs should be processed in order to minimise the total time required to turnout all the jobs.2
(ii) Find the minimum elapsed time.
(b) Compute a 3 -year moving average for the following data: 3

| Year | Sales |
| :---: | :---: |
| 2010 | 43 |
| 2011 | 47 |
| 2012 | 51 |
| 2013 | 52 |
| 2014 | 49 |
| 2015 | 50 |
| 2017 | 52 |

(c) Define time series with an example.
