# BACHELOR OF COMPUTER APPLICATIONS (BCA) (Revised) 

Term-End Examination

December, 2021

## BCS-054 : COMPUTER ORIENTED NUMERICAL TECHNIQUES

Time : 3 hours
Maximum Marks : 100

Note:
(i) Question no. 1 is compulsory. Attempt any three questions from question nos. 2 to 5.
(ii) Any calculator is allowed during examination.

1. (a) Assuming a four decimal digit mantissa, two digit exponent and one digit each for sign of mantissa and exponent, perform the following arithmetic operations, indicate overflow, if any. Use chopping, if required. The result should be in normalised form.
(i) Add $0.7265 \times 10^{-2}$ and $0.7105 \times 10^{1}$
(ii) Subtract $0.2516 \times 10^{+2}$ from $0.1001 \times 10^{3}$
(iii) Multiply $0.5125 \times 10^{50}$ and $0.1251 \times 10^{52}$
(b) Solve the following system of equations using Gauss-Jacobi iteration method :

$$
\begin{aligned}
& 5 x+2 y=19 \\
& 3 x+5 y=19
\end{aligned}
$$

Take initial estimate as $x_{0}=1$ and $y_{0}=1$. Perform only two iterations.
(c) Write the Newton-Raphson iterative scheme for finding the square root of a positive number n .
(d) Write the name and formula of the following operators :
(i) E
(ii) $\nabla$
(iii) $\delta$
(e) Find the Newton's forward difference interpolating polynomial for the data given below :

| $x$ | 1 | 2 | 3 | 4 | 5 | 6 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| $y=f(x)$ | 1 | 12 | 33 | 64 | 105 | 156 |

Hence, calculate the value of $f(x)$ at $x=1 \cdot 5$.
(f) Construct the Newton's divided difference table for the following data :

| $x$ | 2 | 3 | 5 | 6 |
| :--- | :---: | :---: | :---: | :---: |
| $f(x)$ | 5 | 10 | 26 | 37 |

(g) Using Simpson's $\frac{1}{3}$ rd rule, find the approximate value of $I=\int_{0}^{2} \frac{d x}{1+x}$, dividing the interval into four equal sub-intervals.
(h) Define the order and degree of a differential equation. What is the order and degree of the following differential equation?

$$
2\left(\frac{d^{4} y}{d x^{4}}\right)^{5}+\left(\frac{d y}{d x}\right)^{7}+3 x^{2}\left(\frac{d^{2} y}{d x^{2}}\right)^{3}
$$

(i) Write the Newton's backward difference formula for evaluating $\frac{d y}{d x}$.
2. (a) Solve the following equations using Gaussian elimination method with row interchange/pivotal condensation method :

$$
\begin{aligned}
& y+z=1 \\
& 2 x+3 y+4 z=4 \\
& 4 x+2 y-3 z=11
\end{aligned}
$$

(b) Find the first positive root of the equation $x^{3}+x^{2}-10=0$ by Regula-Falsi method.

## Show two iterations.

(c) Find the Taylor/Maclaurin series for $\mathrm{f}(\mathrm{x})=\mathrm{e}^{\mathrm{x}}$ around $\mathrm{x}=0$.
3. (a) Represent the following operators in terms of $E$ :
(i) $\Delta$
(ii) $\nabla$
(iii) $\delta$
(b) Find the missing term (?) in the following data, where $f(x)$ is a polynomial of degree 3 :

| $x$ | 1 | 2 | 3 | 4 | 5 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| $f(x)$ | -3 | 10 | $?$ | 78 | 145 |

Also find the interpolating polynomial using backward difference.
(c) Find the interpolating polynomial that fits the data

| x | 1 | 2 | 5 |
| :--- | :---: | :---: | :---: |
| $\mathrm{f}(\mathrm{x})$ | 4 | 7 | 28 |

using Lagrange's interpolating polynomial method.
4. (a) Given the following values of $x$ and $f(x)$ for $\mathrm{x}=1(0 \cdot 5)^{3}$ :

| $x$ | 1 | $1 \cdot 5$ | 2 | $2 \cdot 5$ | 3 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| $y=f(x)$ | 2 | $4 \cdot 875$ | 10 | $18 \cdot 125$ | 30 |

Find $\mathrm{y}^{\prime}$ and $\mathrm{y}^{\prime \prime}$ at $\mathrm{x}=1.25$ using FD formula. 10
(b) Use the Euler's method to find the solution of the differential equation

$$
\mathrm{y}^{\prime}=\mathrm{t}^{4}+\mathrm{y}^{3} \text { given that } \mathrm{y}(0)=1
$$

Find the solution of the above in the interval $[0,0 \cdot 9]$ with $\mathrm{h}=0 \cdot 3$.
5. (a) Explain the formula for Trapezoidal rule with the help of a diagram. Also find the approximate value of

$$
I=\int_{0}^{1} \frac{d x}{1+x} \text { using Trapezoidal rule }
$$

with only one interval.
(b) What is an Inverse Interpolation? Explain with the help of an example.
(c) Explain, whether in arithmetic, with 4 significant digits, the problem of solving the following system of linear equations

$$
\begin{aligned}
& (2 \cdot 0000) \mathrm{x}+(0 \cdot 6667) \mathrm{y}=2 \cdot 0000 \\
& (1 \cdot 0000) \mathrm{x}+(0 \cdot 3333) \mathrm{y}=1 \cdot 0000
\end{aligned}
$$

is ill-conditioned or not.
(d) Compare and contrast the following methods :
(i) Gauss elimination method and Gauss-Seidel Iterative method
(ii) Bisection method and Regula-Falsi method
