# MASTER OF COMPUTER APPLICATIONS (MCA-NEW) 

## Term-End Examination

June, 2022

## MCS-212 : DISCRETE MATHEMATICS

Time : 3 hours
Maximum Marks : 100
Note: Question no. 1 is compulsory and carries 40 marks. Attempt any three questions from questions no. 2 to 5.

1. (a) Write the mathematical notation for the following :
(i) The set of all odd numbers
(ii) The set of all natural numbers whose square is more than 26
(b) Assuming that p and q are two propositions, find if the following two statements are logically equivalent or not, by constructing the truth table.

$$
\sim(p \vee q) \vee \sim q \text { and }(p \vee \sim q) \vee q
$$

(c) Use the principle of mathematical induction to prove that $1+2+3+\ldots+\mathrm{n}=\frac{\mathrm{n}(\mathrm{n}+1)}{2}$ for each $\mathrm{n} \in \mathrm{N} . \quad 5$
(d) Define the term regular expression with the help of an example.
(e) How many different permutations are possible of the letters, taken all at a time, of the word : ASSESSES ?
(f) A die is rolled once. What are the probabilities of the following events :
(i) Getting an odd number
(ii) Getting at least a value 2
(iii) Getting at most a value 2
(iv) Getting at least 7
(g) Define the problem of the Tower of Hanoi. Explain the recurrence relation to solve this problem.
(h) Draw a hypercube graph $\mathrm{Q}_{3}$ (also called the cubical hypercube).
(i) Find, if the following graphs $\mathrm{G}_{1}$ and $\mathrm{G}_{2}$ are isomorphic or not. Explain how you arrived at your answer.

$\mathrm{G}_{1}$

2. (a) Define the degree and order of a recurrence relation. Find the degree and order of the following recurrence relations :
(i) $\mathrm{a}_{\mathrm{n}}=\mathrm{a}_{\mathrm{n}-1}^{2}+\mathrm{a}_{\mathrm{n}-2} \mathrm{a}_{\mathrm{n}-3} \mathrm{a}_{\mathrm{n}-4}$
(ii) $\mathrm{a}_{\mathrm{n}}=\mathrm{na}_{\mathrm{n}-2}+2^{\mathrm{n}}$
(b) What is a finite automata ? Why is it needed ? How is a finite automata represented? Explain with the help of an example.
(c) What is divide-and-conquer approach ? Explain how this approach can be used to apply binary search in a sorted list.
3. (a) What is proposition? Explain with the help of an example. Explain Disjunction and Conjunction with the help of truth table for each.
(b) Prove the following theorem by direct proof method:
"The square of an even integer is an even integer."
(c) Given the Boolean expression $\left(a^{\prime} \vee\left(b \wedge c^{\prime}\right)\right) \wedge\left(b \vee d^{\prime}\right)$, draw the corresponding circuit, where $a, b, c$ and $d$ are the inputs to the circuitry.
4. (a) Show the intersection and difference operation on two sets using Venn diagram.
(b) Define the terms Domain, Co-domain and Range in the context of a function. Also find the domain, co-domain and range for a function A to B , where $\mathrm{A}=\{1,2,3,4\}$ and $\mathrm{B}=\{1,4,9,16,25\}$.
(c) A committee consisting of 2 male and 2 female workers is to be constituted from 8 male and 9 female workers. In how many distinct ways can this be done?
(d) Show, using the pigeonhole principle, that in any group of 30 people, 5 people can always be found who were born on the same day of the week.
(e) Find how many of the four digit numbers are even.
5. (a) Define the following in the context of graph, with the help of an example :
(i) Complete graph
(ii) Star topology
(iii) Degree of a vertex
(b) Find the complement of the following graph :

(c) What is a bipartite graph ? Explain with the help of an example.
(d) Differentiate between Eulerian graph and Eulerian circuit. Find the Eulerian circuit in the following graph, if it exists.
