# MSTL-003 (Set-2) <br> POST GRADUATE DIPLOMA IN APPLIED STATISTICS (PGDAST) 

Biostatistics Lab

Duration : 3 hours
Maximum Marks : 50

Note: 1. Attempt any two questions.
2. Solve the questions in Microsoft Excel.
3. Use of "Formulae and Statistical Tables Booklet of PGDAST is allowed.
4. Mention necessary steps, hypotheses, interpretations, etc.

1. A group of cancer patients were randomly assigned either Treatment A or Treatment B. They were followed for 300 days to record their time of death. The survival data are as follows:

| Patient <br> ID | Survival <br> Time | Treatment | Outcome <br> (1-Died <br> 0-Censored) |
| :---: | :---: | :---: | :---: |
| P01 | 194 | 1 | 1 |
| P02 | 98 | 2 | 1 |
| P03 | 236 | 2 | 1 |
| P04 | 300 | 1 | 0 |
| P05 | 204 | 1 | 1 |

| P06 | 76 | 2 | 0 |
| :---: | :---: | :---: | :---: |
| P07 | 44 | 2 | 0 |
| P08 | 99 | 1 | 1 |
| P09 | 132 | 2 | 0 |
| P10 | 266 | 1 | 1 |
| P11 | 62 | 2 | 0 |
| P12 | 201 | 1 | 1 |
| P13 | 262 | 1 | 1 |
| P14 | 300 | 1 | 1 |
| P15 | 221 | 2 | 1 |
| P16 | 255 | 1 | 1 |
| P17 | 37 | 2 | 0 |
| P18 | 268 | 1 | 1 |
| P19 | 37 | 2 | 0 |
| P20 | 111 | 1 | 0 |
| P21 | 67 | 2 | 1 |
| P22 | 175 | 2 | 0 |
| P23 | 192 | 1 | 0 |
| P24 | 102 | 2 | 1 |
| P25 | 300 | 1 | 0 |
| P26 | 250 | 1 | 0 |
| P27 | 145 | 1 | 1 |

| P28 | 91 | 2 | 1 |
| :---: | :---: | :---: | :---: |
| P29 | 150 | 2 | 1 |
| P30 | 207 | 1 | 0 |
| P31 | 62 | 2 | 1 |
| P32 | 300 | 1 | 0 |
| P33 | 101 | 1 | 0 |
| P34 | 74 | 1 | 1 |
| P35 | 275 | 2 | 0 |
| P36 | 74 | 2 | 1 |
| P38 | 300 | 28 | 1 |

(i) Estimate the Kaplan-Meier probabilities for both treatments.
(ii) Construct the Kaplan-Meier survival curve for both treatments.
(iii) Test whether there is a significant difference between the distributions of survival times of the patients under Treatment A and Treatment B at $5 \%$ level of significance.
2. A researcher is interested to determine the relationship between the serum creatinine (in $\mathrm{mg} / \mathrm{dL}$ ) with the weight (in kg ) and gender ( 0 for female and 1 for male). The data for 30 patients were collected from the hospital records and are given as follows:

| Serum Creatinine | Weight | Gender |
| :---: | :---: | :---: |
| 0.7 | 46 | 1 |
| 1.3 | 65 | 1 |
| 1 | 59 | 1 |
| 1.5 | 84 | 0 |
| 1.7 | 91 | 1 |
| 1.5 | 78 | 1 |
| 1 | 53 | 0 |
| 0.7 | 49 | 1 |
| 0.5 | 42 | 0 |
| 1.6 | 87 | 0 |
| 1.1 | 53 | 1 |
| 0.8 | 54 | 0 |
| 1.3 | 65 | 1 |
| 1.1 | 61 | 1 |
| 1.2 | 71 | 0 |
| 1.1 | 55 | 1 |
| 0.9 | 55 | 0 |

| 0.9 | 62 | 0 |
| :---: | :---: | :---: |
| 1.1 | 65 | 0 |
| 0.8 | 54 | 0 |
| 0.5 | 45 | 0 |
| 0.6 | 45 | 1 |
| 1 | 62 | 0 |
| 0.6 | 58 | 1 |
| 1 | 65 | 1 |
| 0.5 | 67 | 1 |
| 0.9 | 42 | 0 |
| 1.3 | 62 | 1 |
| 1.1 | 65 | 0 |
| 1.4 | 68 | 0 |

(i) Fit a linear regression model and perform its related analysis at $1 \%$ level of significance.
(ii) Check whether the fitted regression model satisfy the linearity and normality assumptions.
3. (a) A study was conducted to check the efficacy of a vaccine on a particular disease. The researcher selected 258 diabetic and 260 non-diabetic patients suffering from that disease for vaccination. The data so obtained are classified by taking 1 if the disease is cured and 0 if not cured and recorded the results as follows:

|  | Non-diabetic Patient | Diabetic Patient |
| :--- | :---: | :---: |
| Cured | 135 | 120 |
| Non-Cured | 125 | 138 |

Test the hypothesis that the proportion of patients whose disease is cured are different in diabetic and non-diabetic groups of patients, at $5 \%$ level of significance.
(b) A researcher wants to study the effect of different doses (in mg ) of hypertension. He gave different amount of doses to a number of patients and noted the response. The data so obtained are given as follows:

| Amount of Dose | Total No. of Patients | Number of Cured <br> Patients |
| :---: | :---: | :---: |
| 5 | 60 | 24 |
| 10 | 48 | 18 |
| 15 | 40 | 12 |
| 20 | 80 | 20 |
| 25 | 104 | 26 |

For the given data:
(i) Fit a logistic regression model.
(ii) Determine the variance for the estimates of $\mathrm{B}_{0}$ and $\mathrm{B}_{1}$.
(iii) Test the significance of the model coefficients $B_{0}$ and $B_{1}$ at $5 \%$ level of significance.
(iv) Determine the McFadden, Cox and Snell pseudo R-squared. 15
