

**MBA – MARKETING/FINANCE/HR/
PRODUCTION & OPERATIONS
MANAGEMENT (MBABM)**

00358

Term-End Examination

June, 2015

MBME-001 : ADVANCED CORPORATE FINANCE

Time : 3 hours

Maximum Marks : 100

Note :

- (i) *Section I is compulsory.*
 - (ii) *In Section II, attempt any five questions. All questions are based on the case Salem Foods given with the question paper.*
 - (iii) *Assume suitable data wherever required.*
 - (iv) *Draw suitable sketches wherever required.*
 - (v) *Italicized figures to be right indicate maximum marks.*
-

SECTION I

1. The President of ABC Limited made this statement in the company's Annual Report, "ABC's primary goal is to increase the value of its stockholders' equity over time". Later on in the report, the following announcements were made :
 - (a) The company is spending ₹ 100 crores to start a new plant. No revenues will be generated by this plant for four years. Earnings during this period will therefore be depressed.
 - (b) The company is increasing its use of debt. Whereas until now assets were financed 35% with debt and 65% with equity, henceforth the financing mix will be 50-50.
 - (c) The company has been paying out half its earning as dividends. Henceforth, only 30% of its earnings will be paid out as dividends.

How do each of the above actions fit in with the objectives of shareholders' wealth maximization ? What factors could have prompted these actions and what could have been the thinking process of the management of ABC Limited in arriving at these decisions ? Your answers must reveal an appreciation of the conceptual issues involved.

Each of the announcements are separate and not linked. Treat each of the announcements as independent of each other and answer them separately.

10+10+10=30

SECTION II

(Refer to the case attached)

2. What is Salem Food's capital structure ? 14
3. What is Salem's pre-tax cost of debt ? What is Salem's cost of equity ? 14
4. Calculate the cost of capital for Salem. 14
5. Which is desired — using the book values or market values in determining the cost of capital ? Why ? 14
6. How can the firm raise \$85 million for the acquisition without changing the capital structure ? 14
7. Wendover believes that Salem's current cost of capital can be used as the hurdle rate to evaluate the acquisition of Sonzoni Foods. Under what conditions is this appropriate ? 14
8. Assuming a net income in 1990 of \$182 million, how would you suggest that the firm finance its acquisition ? 14

SALEM FOODS

COST OF CAPITAL OR REQUIRED RETURN

All rational investors want to invest in securities (or projects) that are expected to yield a return greater than their cost of capital. For the Chief Financial Officer (CFO) of a company, the procedure for determining where to invest is a three-step process. The first step is finding the expected return on the securities (or projects) in which the firm may be interested. The second step is the determination of the firm's cost of capital. The final step is selecting those securities (or projects) whose expected return is greater than the firm's cost of capital. In reality neither of the first two steps precedes the other as the CFO may calculate the firm's cost of capital on an annual, a semiannual, or even a quarterly basis, depending on changes in the capital markets. The calculated cost of capital may then be compared to the expected returns of the various securities and capital projects available.

HISTORY OF SALEM FOODS

Salem Foods was founded in 1896 by Earle Greymore as a manufacturer of quality chocolate candy. As with most food companies established in the United States in that period, Salem started as a modest manufacturer of a single product that was sold locally. Later, if successful, those firms expanded their sales efforts to state, regional, national and sometimes even to international areas.

Salem Foods was one of the successful companies. Greymore's first product was a chocolate bar that sold for two cents. The bar, known as the Salem Bar, soon became famous for its quality and fine taste. Greymore expanded production to meet the rising demand for the Salem Bar, but growth never exceeded cash available to pay for the expansion.

Two of the basic tenets on which Greymore founded and ran Salem Foods were to make a quality chocolate bar and not to go into debt. These tenets were considered almost sacrosanct, and Greymore believed they were the reasons for his success while many other food companies failed.

By 1936, when Greymore turned the reins of his company over to his son, John, Salem Foods had grown into a respected and well-known \$2.5 million regional chocolate firm. It had survived the Great Depression, according to Earle Greymore, because the firm still produced a quality product and, above all, had no debt. John Greymore followed the principles laid down by his father, and in the next 30 years Salem Foods grew to a national firm with \$125 million in sales. Although Salem Foods had purchased a confectionery candy firm, over 90 percent of the sales were from chocolate candy. Significantly only 5 percent of the firm's capital structure was in long-term debt, the debt needed to purchase the confectionery candy firm.

In 1967, when John's son Earl became President of Salem Foods, the family still owned all the stock of the firm and the board of directors was made up entirely of family members. However,

in 1971 the company was forced into going public because of two circumstances. The first was the need to raise cash to pay estate taxes following the death of John Greymore. The second came from the increasing awareness that the firm needed to modernize its plants to compete with other food companies, which were slowly taking market share from Salem Foods with better quality candy products and higher profits from their automated, modern equipment.

By the early 1980s the firm had completed its modernization, improving the quality of its products and reducing operating expenses. However, the firm was totally dependent on the chocolate and confectionery business and its managers were beginning to realize that diversification into other lines of the food business might be necessary for Salem Foods to survive in the increasingly competitive business environment. In addition, some family members were beginning to question the financial practices of the firm and the effects those practices had on the stock price. They noticed that throughout the 1970s, many of the old-line family food businesses were purchased by larger, publicly held firms run by managers who were not majority shareholders of the firm. More importantly they noticed that the returns on the shares sold seemed much higher than the returns they were receiving from their stock.

During the early 1980s, Salem Foods did expand into the pasta business through the purchase of three family-owned firms and by 1989 had an 18 percent market share of the \$1 billion U.S. pasta business. Salem financed the purchase of these businesses through two bond issues.

Long-term debt, however, was never more than 20 percent of total assets.

Sam Wendover

Sam Wendover, the Chief Financial Officer (CFO) of Salem Foods, was hired in 1984 with specific instructions to improve the return on the financial resources of the firm. Wendover's background included four years as the cash manager of a large corporation with sales in excess of \$9 billion. He was a graduate of an MBA program that is nationally known for its emphasis on financial management. Wendover saw the job as CFO of Salem Foods as an outstanding opportunity to affect the financial decision-making of a firm in transition from family ownership to one that was becoming a multibillion dollar, publicly held firm.

This Monday morning Wendover has just walked into his office at 7:40 to find a note stuck on his computer's video monitor to call Earl Greymore, the CEO of Salem Foods. The posting of the note was unusual in that most intra-office memos were sent via the electronic mail system, but then very few of Salem's top executive managers ever used their computers for this or any other purpose. Greymore, however, was making a real effort to bring Salem Foods into the modern era, insisting that the computers be installed and that all managers below the level of the executive officers take in-house training on how to use them. He also had many of the top executives attend financial seminars sponsored by the Wharton School. Wendover had suggested the seminars to Greymore as a vehicle to help these executives understand some of the changes

he thought were necessary to improve Salem Foods' financial performance.

Wendover called Greymore, who asked him to come up to his office. In the next 30 minutes Wendover learned that Salem Foods was considering the purchase of Sonzoni Foods, a pasta producer with annual sales in excess of \$100 million, for \$85 million. Before a decision could be made, Greymore wanted the answers to three financial questions from Wendover. First, what was the expected return from this proposed purchase? Second, what was Salem Foods' cost of capital? Finally, what was Wendover's recommendation on how the purchase could be financed?

Financial Information

Wendover reviewed the Salem Foods' financial data. (See Exhibits 1 and 2) The average outstanding balance of short-term, interest-bearing debt in 1989 was \$76,132,000 and the weighted average interest rate was 8.2 percent. Domestic borrowing under lines of credit and commercial paper was used to fund seasonal working capital requirements and provide interim financing for business acquisitions. Maximum short-term borrowings at any month end were \$372,400,000.

Salem Foods had two long-term AA+ rated bonds outstanding. The first was an 8.25 percent sinking fund debenture due in 12 years. This debenture is traded on the New York Stock Exchange and closed Friday at $91\frac{3}{8}$. Of the original \$150 million issue, \$133 million is still outstanding. The second issue was for

\$100 million and had a coupon interest rate of 9-375 percent. The entire issue was sold in 1986 in a private placement to two life insurance companies, and the issue will mature in 2016. Wendover then called Salem's investment banker and learned that the banker was highly confident that Salem Foods could issue up to \$100 million of new debt at the current return on Salem's outstanding long-term debt.

Like many other family-controlled but publicly held businesses, Salem Foods had two classes of common stock : Common Stock and Class B stock. The Common Stock has one vote per share and the Class B stock (held or controlled by family members) has 10 votes per share. However, the Common Stock, voting separately as a class, is entitled to elect one-sixth of the board of directors. With respect to dividend rights, the Common Stock is entitled to cash dividends that are 10 percent higher than those declared and paid on the Class B stock. There are a total of 75 million shares of Common Stock and 15 million shares of Class B stock outstanding. The current price of both the Common Stock and Class B stock is \$35 and its beta are 0.95. The Common Stock and Class B Stock generally vote together without regard to class on matters submitted to stockholders.

The growth rate of net income, earnings per share, dividends, and Common Stock prices are given in Exhibit 3 and have averaged about 14 percent a year over the last five years. Some of this growth rate is the result of an aggressive repurchase of the firm's Common Stock. Over the past three years the firm has repurchased

over 5 million Common Stock shares. Finally, Wendover looked up the capitalization ratio for other firms in the food industry. (See Exhibit 4) As he expected, Salem Foods had a much lower debt ratio than almost all other companies in the industry group.

Sam Wendover wrote down the additional information that he thought he needed before starting to work. The current Treasury Bill rate was 8.0 percent and the return on the S & P 500 has averaged 16 percent over the past 10 years. Salem's current combined federal and state income tax rate is 40 percent. The beta for Sonzoni Food was 0.90, almost the same as Salem Foods.
