---

---

1. A 2-year-old child with a weight of 5 kg is brought with diarrhoea for 2 days. There is no blood in stool. Write the dehydration management of this child. List the essential steps in the management of a severely malnourished hospitalized child. 5+5=10
  
2. Write short notes on the following : 3×5=15
  - (a) Treatment of acute otitis media
  - (b) Transitional stools in newborn
  - (c) Assessing adequacy of feeding in a newborn LBW baby

3. Write short notes on the following : 3×5=15

- (a) Treating and preventing Vitamin A deficiency
- (b) Pica
- (c) Impetigo

4. Briefly discuss the following : 3×5=15

- (a) Emergency room management of a child with seizures
- (b) Treatment of congestive cardiac failure
- (c) Severe complicated measles

5. A 4-year-old child is brought with coma. The child is breathing, not cyanosed, has cool hands with CFT of 4 seconds and weak pulses. There is no diarrhoea. How will you triage this child ? List the signs on the basis of which you will assign the category. Outline the management steps that may be required. 8+7=15
