MMT-009

**M. SC. (MATHEMATICS WITH
APPLICATIONS IN COMPUTER
SCIENCE) [M. SC. (MACS)]**

Term-End Examination

December, 2023

MMT-009 : MATHEMATICAL MODELLING

Time : $1\frac{1}{2}$ Hours

Maximum Marx : 25

Weightage : 70%

Note : (i) *Attempt any **five** questions.*

(ii) *Use of scientific non-programmable calculator is allowed.*

1. (a) List the *two* essentials and *two* non-essentials in the problem to develop a model to help the insurance company decide the premium it should charge for different risks to ensure economic viability and maximise its profits. 2

P. T. O.

- (b) Calculate the expected return and risk of a security given the following information : 3

| Probabilities (P_{ij}) | Returns, R_j |
|--|----------------------------------|
| 0.15 | 0.20 |
| 0.20 | 0.16 |
| 0.40 | 0.12 |
| 0.10 | 0.05 |
| 0.15 | - 0.05 |

2. Find a linear demand equation that best fits the following data, and use it to predict annual sales of homes priced at ₹ 14,00,000 : 5

| x = Price (lakhs of ₹) | y = Sales of new homes this year |
|--|--|
| 16 | 126 |
| 18 | 103 |
| 20 | 82 |
| 22 | 75 |
| 24 | 82 |
| 26 | 40 |
| 28 | 20 |

3. Do the stability analysis of the following model which is formulated to study the effect of toxicant on a competing species : 5

$$\frac{dN_1}{dt} = r_1 N_1 - \alpha_1 N_1 N_2 - d_1 C_0 N_1$$

$$\frac{dN_2}{dt} = r_2 N_2 - \alpha_2 N_1 N_2$$

$$\frac{dC_0}{dt} = k_1 P - g_1 C_0 - m_1 C_0$$

$$N_1(0) \geq 0, N_2(0) \geq 0, C_0(0) = 0$$

4. (a) Define the following terms : 2

(i) Variational matrix

(ii) Hurwitz's criteria

- (b) A spherical tumour is occupying the space in an organ with outer and inner radii 0.2×10^{-6} mm and 0.001×10^{-9} mm, respectively for tumour and cancer cells. Find the density of cancer cells in the vicinity of the surface. 3

5. A tax consulting firm has 3 counters to receive people who have problems concerning their incomes, wealth and taxes. On the average 48 persons arrive in an 8-hour day. Each tax adviser spends 15 min. on an average on an

arrival. If the arrivals are Poissonly distributed and service times are according to exponential distribution, find : 5

- (i) average number of customers in the system;
 - (ii) average number of customers waiting to be served;
 - (iii) average time a customer spends in the system.
6. Discuss the linear stability of the following discrete time population models : 5

$$x_{n+1} = \frac{rx_n}{x_n + A}$$
