  - (c) Management of epilepsy

5. Answer the following : *5+5=10*

Priya is 9-month-old. She weighs 8 kg and is brought to facility with complaint of fever with cough for five days. The doctor checked for general danger signs. She is not able to drink and has been vomiting everything. She has not had convulsions and she is not lethargic or unconscious. On assessment for cough, her breathing rate is 58 per minute and she has chest indrawing. She does not have stridor. She does not have diarrhoea. On assessment for fever, the risk of malaria is low. She does not have measles now or within last 3 months. Priya does not have ear discharge or pain. She is not low-weight for age and has some pallor.

- (a) List the probable diagnosis (classification) for this case with justification.
  - (b) Draw the management plan for this case.
-
